

Switzerland offers many beautiful places, and we are pleased whenever our guests use their drones to produce films about Switzerland's sights. Flying drones is not a problem in a lot of places in Switzerland. However, there are a few restrictions that you need to observe.

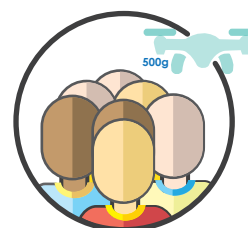

01
All drones must always remain in direct sight of the persons operating them.

02
Drones may not fly over people and animals at a low altitude.

03
Drones should always be operated in such a way that they represent no risks and do not disturb other people.

04
Drones weighing more than 500g may not be flown at a distance of less than 100m from a gathering of people. It is prohibited to fly over a group of people without a permit from the Federal Office of Civil Aviation FOCA. Further local restrictions may apply.

05
Drones may not be operated at less than a 5km radius of airfields and helicopter bases without a permit (see map).

06
Operating drones in certain nature reserves is prohibited (see map).
